

ENDLERS GUPPY - RED NEON MALE

Poecilia wingei

FEEDING

Omnivorous. Eats most smaller sized aquarium foods.

ADDITIONAL COMMENTS

Endler's Guppy has become very popular, particularly for nano tanks. The males are very attractive with their luminescent colours. Previously considered a variety of Guppy, it is now considered a separate species. Males only grow to around half the size of the females which can grow to 4-4.5cm. A number of colour varieties have been created by breeders, some the result of hybridising with Guppies. Ideal fish for Nano tanks.
