

SCARLET FIDDLER CRAB

Uca sp.

ADDITIONAL COMMENTS

Amphibious rather than fully aquatic, provide a partially filled aquarium, landscaped to provide plenty of habitat for the crabs above water. Expert escape artists, so use a tight-fitting cover. Fish tankmates must be large enough to not be eaten by the crabs, but not too big where the fish might start to consider the Crabs as a potential food item! Scarlet Fiddlers prefer slightly brackish water rather than freshwater.

Disclaimer: The information provided here is of a general nature only. There are site specific factors that are not addressed here that may also affect the health and well being of your fish, as such Coburg Aquarium will not be held liable for the performance of your fish.
